

Decisions we need from you

23 questions that let us finish the site's policy and legal pages.

29 August 2026 · prepared by the development team

A production-readiness audit of publicationmart.com found that most of the standard policy pages a publishing and e-commerce site is expected to carry are either missing or exist only as paragraphs buried inside the Terms of Service. The development work to fix this is ready to go — the pages, routes and cookie-consent system are already being built. What we cannot do is invent the business decisions behind them. This sheet lists exactly what we need from you, with space to answer against each item.

Please answer Section 4 first

Google Analytics and the Facebook Pixel currently run for every visitor with no consent banner and no way to opt out. Every other item in this document is a missing page; this one is live on the site today. Your three answers in Section 4 unblock the fix.

SECTION 1 OF 4

Company identity

Every policy page must name who is legally behind the website. None of this information is published on the site today.

1. What is the registered legal entity behind the website?

The site says “PublicationMart” and the Facebook page says “RK Publications”. The policies must name the entity that actually sells to customers.

Answer

2. What is the registered office address?

Required on the policy pages, and by most payment gateways.

Answer

3. GSTIN / company registration number, if registered?

It belongs on invoices and in the Terms of Service.

Answer

4. Which email address should customers use for support?

The site currently publishes editor.publicationmart@gmail.com. A Gmail address on a site that takes payments looks informal — do you want an address on your own domain?

Answer

5. What support hours and response time can we promise?

So the Support and Help Center pages state a real commitment, for example “we reply within one working day”.

Answer

6. Who is the Grievance Officer? (name, designation, email, phone, and how fast complaints are resolved)

Commonly required of Indian e-commerce operators under the Consumer Protection (E-Commerce) Rules. Not published anywhere today. Please confirm the exact obligation with your legal advisor.

Answer

7. Which city's courts govern disputes?

The Terms have a “Governing Law” section, but no jurisdiction is named in it.

Answer

SECTION 2 OF 4**Refunds, cancellation and shipping — confirm the numbers**

The Terms of Service already describes refund stages, shipping and returns in outline. What is missing is the actual figures. These answers become four dedicated policy pages: Refund, Cancellation, Shipping, and Return & Exchange.

8. How much is refunded at each stage — before work starts, while work is in progress, and after publication?

The Terms names these three stages but never says what a buyer actually gets back at each one. A percentage or flat rule per stage is enough.

Answer

9. What is never refundable?

For example: AI plan purchases once used, eBook downloads, anything after an ISBN has been allocated. Say it now, or every case becomes an argument later.

Answer

10. How long do refunds take, and how are they paid?

For example “7–10 working days, to the original payment method”.

Answer

11. Until when can a customer cancel an order?

Before dispatch? Before work begins? Is the rule different for printed books and digital purchases?

Answer

12. Shipping: how fast do we dispatch, how long does delivery take (within India and abroad), what does it cost, and which couriers do we use?

You ship physical books, and none of these numbers exist on the site yet.

Answer

13. A book arrives damaged or misprinted — what happens?

How many days does the customer have to report it, do they get a replacement or a refund, and who pays the return postage? This is the most common real support case.

Answer

14. Are author copies returnable?

Authors buy their own copies at cost, which most publishers treat differently from store sales. We need the stated rule either way.

Answer

SECTION 3 OF 4**New policies — decisions only you can make**

These pages do not exist in any form yet. Each one needs a business decision before it can be written.

15. What content will PublicationMart refuse to publish, and what happens when someone breaks the rule?

Plagiarism, hate speech, adult content, defamation, copyright infringement — and whether a breach means removal, refusal of refund, or closing the account. This becomes the Acceptable Use Policy.

Answer

16. What are the rules for the public Studio (blog)?

Admins already approve or reject submissions — against what criteria? Can an author appeal a rejection? This becomes the Community Guidelines page.

Answer

17. What is our official position on AI-generated content?

Who owns AI-generated text and images — the author or the platform? Do we guarantee anything about accuracy? Must authors disclose AI use in their books? This matters most for the academic titles that dominate the catalogue.

Answer

18. What accessibility commitment do we make, and who handles accessibility complaints?

A single sentence is enough, for example “working toward WCAG 2.1 AA”, plus a contact address.

Answer

19. If a security researcher finds a flaw in the site, where do they report it — and do we promise not to pursue them for reporting responsibly?

This becomes the Security / Responsible Disclosure page. Without it, the likely route is social media.

Answer

20. Do we serve customers in the EU, or business customers who will ask for a Data Processing Agreement?

A simple yes or no. It decides whether we build the DPA page at all.

Answer

SECTION 4 OF 4**Visitor tracking — please answer these first**

The site currently loads Google Analytics (G-0XH0VKQQX8) and the Facebook Pixel (1303589550727690) for every visitor, before anyone consents and with no way to opt out. This is the one item on this sheet with live exposure today.

21. Should both trackers stay?

If either Google Analytics or the Facebook Pixel is not actually being used, removing it is simpler than governing it.

Answer

22. When a visitor has not yet consented, should tracking be blocked, or run with only a notice shown?

Our recommendation: block until the visitor agrees. It is the safer default and costs nothing extra to build — the system is ready for either answer.

Answer

23. Are any other third-party scripts planned — chat widget, advertising pixels, anything else?

It is cheaper to design the consent system once, knowing everything it must cover.

Answer

What happens once you answer

The development side is not waiting: the cookie-consent system, the four commerce policy pages (seeded with the text already in the Terms), the corrected footer links and the missing error pages are being built now. Your answers drop straight into the prepared pages. Sections 1 and 3 — in particular the Grievance Officer item — should be confirmed with your legal advisor; this document is a requirements list, not legal advice.
